

AMF SERIES

ADJUSTABLE MOTOR FIXTURES

FEATURES

- Accommodate motors up to 8¼ inches in diameter
- Used with most Magtrol HD Series Dynamometers
- Secure anchoring system
- Easy motor centering
- Extremely versatile and adaptable
- Vibration protection
- Scratch-free clamping
- Tool-free adjustment
- Direct mounting to Magtrol TAB Series Dynamometer Table or dynamometer base plate (depending on model and system configuration)

DESCRIPTION

Magtrol's AMF Series Adjustable Motor Fixtures are used to secure small to medium-sized motors in place while running any test. These extremely versatile fixtures also enable easy motor centering for coupling to a Magtrol HD Series Hysteresis Dynamometer. (Couplings can be supplied upon request.) Various motor lengths are accommodated by either an attached T-slot base plate or sliding base, depending on the model.

The AMF-1, -2 and -3 Fixtures feature one or two adjustable bridges, each fitted with a fluted knob clamp screw, to allow clamping anywhere along the axis of the motor. The adjustable bridge on the AMF-V Fixture incorporates a straight-line action clamp with a V-angle rubber padded clamp to maximize the mounting area.

To safeguard the motor, locking thumb screws provide protection against vibration and all motor-to-fixture contact surfaces are nylon padded for scratch-free clamping.
